PROFILE

Full-Stack Developer with hands-on experience building scalable, data-driven web applications (Next.js, TypeScript, Java Spring Boot) and shipping SaaS products from the ground up as a Founding Engineer. Focused on performant architectures, AI integration, and responsive design. Comfortable working in Agile and cross-functional environments.

WORK EXPERIENCE

Frontend Developer | Contactlab (TeamSystem Group) – Milan

March 2026 – Present *Tech Stack: React, TypeScript, fp-ts, Ant Design*

- Building the front-end of a Customer Data Platform (CDP) using React, TypeScript and functional programming paradigms with fp-ts.
- Developing complex UI components with Ant Design.
- Working in an Agile team on an enterprise codebase, focusing on code quality and reusable patterns.

Junior Developer | HRM Group – Milan

November 2024 – March 2026 *Tech Stack: Next.js, TypeScript, Tailwind, SCSS, Ant Design, Java Spring Boot*

- Built and maintained the front-end architecture of the main product from scratch, translating Figma designs into fully responsive interfaces (100% mobile-friendly).
- Integrated back-end features with Java Spring Boot, improving data flows and system reliability.
- Contributed to 2+ Agile projects, building reusable components and optimising data-layer caching.
- Mentored a junior intern: wrote documentation and onboarding materials that reduced ramp-up time by 40%.

PROJECTS

Founding Engineer | Newmann AI

2024 – Present *Tech Stack: Next.js, TypeScript, React, Java Spring Boot, Supabase, PostgreSQL, OpenAI, Pinecone, Resend, Vercel, Render*

- I joined the project at its inception as Founding Engineer and Tech Lead. My main focus is AI engineering with Spring AI: I wrote all prompts from scratch and designed the retrieval pipeline with Pinecone for semantic search. The platform, currently in MVP, automates email management via label/rule automation with NLP and Gmail and Microsoft/Azure integration.
- I designed the entire stack architecture, from technology selection to REST API design with Java Spring Boot, including the Gmail and Microsoft/Azure integrations. The frontend is built in Next.js/React with fp-ts, with a PostgreSQL database on Supabase with RLS and multilingual support.
- I set up and manage the full infrastructure: CI/CD with GitHub Actions, deployment on Vercel and Render, analytics with PostHog EU, and transactional emails via Resend.

Founding Engineer | Macrobite

2025 – Present *Tech Stack: React, Supabase, TypeScript, Supabase Edge Functions*

- I joined the project from day one as Founding Engineer, contributing to product definition and development of the web app. Macrobite, currently in MVP, lets users order food and have it delivered to refrigerated lockers installed in gyms, with access via PIN or QR code generated automatically at checkout.

- I evaluated several hardware solutions (TTLock, Seam API, igloohome, Akiles) and implemented the access logic via Supabase Edge Functions and a React frontend.

Side Project | Atlas — AI Travel Planning Platform

2024 *Tech Stack: React.js, Java Spring Boot, PostgreSQL, Amadeus API, Google OAuth, OpenAI, Groq, Docker, Supabase*

- Built a full-stack AI-powered travel planning app with itinerary generation via Groq/OpenAI, real-time flight data via Amadeus API, and JWT + Google OAuth authentication.
- Optimised AI performance by migrating from Python + Ollama Mistral to Groq + OpenAI, cutting response times from over 5 minutes to a few seconds.

Freelance Full Stack Developer | Sacith s.r.l. — Digital Product Catalogue

February 2025 – Present *Tech Stack: PHP, HTML, Tailwind, Javascript, SQL, GA4, GTM, Google Search Console*

- Managed the full development lifecycle independently, keeping direct communication with the client to gather requirements and iterate on UX feedback within bi-weekly sprints.
- Implemented SEO best practices and integrated GA4, GTM and Search Console (+35% organic traffic), and built an internal PHP + SQL dashboard for autonomous product management.

SKILLS

Frontend: HTML, CSS, JavaScript, TypeScript, React, Next.js, fp-ts, Redux, Axios, Tailwind CSS, SASS, Ant Design, GSAP, Bootstrap

Backend: Java Spring Boot, Node.js, Express.js, PHP, REST APIs, Python

Database: SQL, PostgreSQL, MySQL, MongoDB, Firebase, Supabase

Analytics/SEO: Google Analytics, Google Tag Manager, Google Search Console

Tools: VS Code, IntelliJ, Postman, Figma, Git, GitHub, Bitbucket, Vercel, Docker, Insomnia

Soft Skills: Problem Solving, Ownership & Autonomy, Team Collaboration, Mentorship, Adaptability, Attention to Detail

EDUCATION

B.Sc. in Computer Science — ongoing

Università degli Studi di Milano

Computer Science for Digital Communication

High School Diploma — 2017–2021

IISS "A. Ponti" Gallarate

Technical Institute
